Portfolio: portfolio-gamma-two-d8j6b2mgkq.vercel.app

EDUCATION

Ritsumeikan Asia Pacific University (APU)

B.B.A., Finance

- 1st Place, APU Annual Hackathon 2025; 1st Runner-Up and Best Speaker, Hult Prize APU Campus Round 2026.

Beppu, Japan

Expected 2029

YOUNITED International School

International Baccalaureate Diploma - HL: Computer Science, English, Business

Israel

2025

EXPERIENCE

Stick'Em Pte Ltd (Singapore EdTech; Hult Prize Global 2025 winner)

Contract Software Engineer

Remote from Japan

May 2026 - Present

- Rebuilt production slide-delivery infrastructure serving teachers in Brunei and the Philippines: replaced failing Google Slides iframes with a pre-processed WebP pipeline (Slides API, Sharp, Supabase CDN) - ~15x faster on simulated Slow-3G (678ms vs 10s+), legacy iframe kept as automatic fallback.
- Built a virtualized snap-scroll slide viewer (current slide +/-2) with dual IntersectionObserver media gating; validated against 55+ slide decks and CEO-tested across network throttling profiles.
- Identified and closed a public-bundle secret exposure (NEXT_PUBLIC_ prefix) before merge; maintained SQL-verified QA over agent self-reports and strict branch isolation with zero commits to main.
- Separately shipped a curriculum-alignment engine mapping STEM lessons to 13 government standards (UK, India, USA) with anti-hallucination index-only selection and two-tier validation.

Retro Studios (under StarLabs)

Founder & Creative Director

Beppu, Japan

Apr 2026 - Present

- One-person AI creative studio running a paid campaign for DK2R Football Wear (2026 World Cup capsule): 12 country editions, 36 SKUs, 150+ AI-generated hero images delivered; 55-asset manufacturing QA with zero redos.
- Solo-built the brand e-commerce platform (Next.js 14, Supabase, live PayPal + Stripe on Vercel) and an 8-layer reference-locked prompt architecture reused across every edition.

GOMI Snap

Founder & CTO

Beppu, Japan

Nov 2025 - 2026

- AI waste-classification PWA (GPT-4V + rule engine reverse-engineered from municipal PDFs) for a city with 20+ waste categories: 520+ organic users, 95.3% adoption intent (n=400), Beppu City government engagement.
- Shipped GOMI Snap 2.0 (per-tenant QR logging + property-manager compliance dashboards); wound the company down and folded it into StarLabs.

SELECTED PROJECTS

AI Hack 2026 (AIFUL) - Lead Modeler, Team StarLabs

Kyoto, Mar 2026

- Credit-default prediction on real consumer-finance data (68,546 applications): peak public AUC 0.7635 (briefly 2nd), 4th at prelims, top-8 Kyoto finalist - the only all-freshman team; diagnosed temporal drift (fold AUC 0.774 to 0.686) and designed dual StratifiedKfold + out-of-time validation; reverse-engineered a lost pipeline from submission rank arrays.

MIRU - Developer (72-hour build)

APU, Mar 2026

- Voice AI interview coach for foreigners job-hunting in Japan, built on Claude with simulated Japanese-HR evaluation and English debriefs; Bronze Prize at the Kyutech x Science Tokyo x APU Joint Hackathon - the only APU team on the podium among 15+ teams.

SCRAPYARD - Spec-Driven Build

2026

- 3D multiplayer browser FPS shipped in one day from a ~200-line spec executed by Claude Code: server-authoritative 30Hz netcode with client-side prediction on Cloudflare Durable Objects, Three.js client, 91 automated tests. Live at scrapyard-lake.vercel.app.

SKILLS & LANGUAGES

- Programming: TypeScript, JavaScript, Python, Java, SQL; React, Next.js, FastAPI, Node.js, Express.
- AI / ML: LightGBM, CatBoost, XGBoost, Optuna, scikit-learn; Claude & OpenAI APIs, prompt architecture, LLM evaluation design; n8n workflow orchestration and agent pipelines.
- Infrastructure: Supabase/Postgres, Vercel, Cloudflare, Google Cloud APIs, Git; performance engineering (CDN pipelines, virtualization, caching).
- Languages: English (native), Spanish (intermediate), Japanese (developing).
