Portfolio: xsofficialbrand.com/tech

## EDUCATION

**Ritsumeikan Asia Pacific University (APU)** **Beppu, Japan**
*B.B.A., Finance* *Expected 2029*
- 1st Place, APU Annual Hackathon 2025; 1st Runner-Up and Best Speaker, Hult Prize APU Campus Round 2026.

**YOUNITED International School** **Israel**
*International Baccalaureate Diploma - HL: Computer Science, English, Business* *2025*

## EXPERIENCE

**Stick'Em Pte Ltd (Singapore EdTech; Hult Prize Global 2025 winner)** **Remote from Japan**
*Contract Software Engineer* *May 2026 - Sep 2026*
- Rebuilt production slide-delivery infrastructure serving teachers in Brunei and the Philippines: replaced failing Google Slides iframes with a pre-processed WebP pipeline (Slides API, Sharp, Supabase CDN), ~15x faster on simulated Slow-3G (678ms vs 10s+), legacy iframe kept as automatic fallback.
- Built a virtualized snap-scroll slide viewer (current slide +/-2) with dual IntersectionObserver media gating; validated against 55+ slide decks and tested across network throttling profiles.
- Identified and closed a public-bundle secret exposure (NEXT_PUBLIC_ prefix) before merge; kept SQL-verified QA over agent self-reports and strict branch isolation, zero commits to main.
- Shipped a curriculum-alignment engine mapping STEM lessons to 13 government standards (UK, India, USA) with anti-hallucination index-only selection and two-tier validation.

**Ajiwow Inc. (ROKU SHOKU, Techstars Tokyo 2026)** **Tokyo, remote**
*Freelance Creative Technologist* *Sep 30 - Nov 2026*
- Built a JA/EN Astro site deployed on Azure Static Web Apps in the client tenant with GitHub Actions push-to-deploy and per-PR previews; moved the repo into the client GitHub org and handed the finish to in-house engineers.
- Shipped the brand system (18-page guide, tokens as CSS/JSON, Claude design system and skill) in 2 days; scripted a Python print pipeline with a 31-point automated check, and an audio pipeline (demucs, ElevenLabs, -14 LUFS mastering).

**Retro Studios (under StarLabs)** **Beppu, Japan**
*Founder & Creative Director* *Apr 2026 - Present*
- One-person AI creative studio running a paid campaign for DK2R Football Wear (2026 World Cup capsule): 12 country editions, 36 SKUs, 150+ AI-generated hero images delivered; 55-asset manufacturing QA with zero redos.
- Solo-built the brand e-commerce platform (Next.js 14, Supabase, live PayPal + Stripe on Vercel) and an 8-layer reference-locked prompt architecture reused across every edition.

**GOMI Snap** **Beppu, Japan**
*Founder & CTO* *Nov 2025 - 2026*
- AI waste-classification PWA (GPT-4V + rule engine reverse-engineered from municipal PDFs) for a city with 20+ waste categories: 520+ organic users, 95.3% adoption intent (n=400), Beppu City government engagement.
- Shipped GOMI Snap 2.0 (per-tenant QR logging + property-manager compliance dashboards); wound the company down and folded it into StarLabs.

## SELECTED PROJECTS

**AI Hack 2026 (AIFUL) - Lead Modeler, Team StarLabs** **Kyoto, Mar 2026**
- Credit-default prediction on real consumer-finance data (68,546 applications): peak public AUC 0.7635 (briefly 2nd), 4th at prelims, top-8 Kyoto finalist, the only all-freshman team; diagnosed temporal drift (fold AUC 0.774 to 0.686) and designed dual StratifiedKFold + out-of-time validation; reverse-engineered a lost pipeline from submission rank arrays.

**MIRU - Developer (72-hour build)** **APU, Mar 2026**
- Voice AI interview coach for foreigners job-hunting in Japan, built on Claude with simulated Japanese-HR evaluation and English debriefs; Bronze Prize at the Kyutech x Science Tokyo x APU Joint Hackathon, the only APU team on the podium among 15+ teams.

**SCRAPYARD - Spec-Driven Build** **2026**
- 3D multiplayer browser FPS shipped in one day from a ~200-line spec executed by Claude Code: server-authoritative 30Hz netcode with client-side prediction on Cloudflare Durable Objects, Three.js client, 91 automated tests. Live at scrapyard-lake.vercel.app.

## SKILLS & LANGUAGES

- Programming: TypeScript, JavaScript, Python, Java, SQL; React, Next.js, Astro, FastAPI, Node.js, Express.
- AI / ML: LightGBM, CatBoost, XGBoost, Optuna, scikit-learn; Claude & OpenAI APIs, prompt architecture, LLM evaluation design; n8n workflow orchestration and agent pipelines.
- Infrastructure: Supabase/Postgres, Vercel, Azure Static Web Apps, GitHub Actions CI/CD, Cloudflare, Google Cloud APIs, Git; performance engineering (CDN pipelines, virtualization, caching).
- Languages: English (native), Spanish (intermediate), Japanese (developing).
